Summary

I am an applied machine learning practitioner with a PhD from MIT focused on research on scientific machine learning, applied mathematics, and numerical computation, applied to problems in fluid dynamics. I have industry experience in the development of production-quality machine learning models tailored for constrained and multi-objective optimization problems. I have also been involved in deploying these models to cloud-based containerized applications for high throughput inference.

Education

Massachusetts Institute of Technology • Cambridge, MA 06/2017 – 07/2021
Ph.D. in Mechanical Engineering • GPA: 5/5
Advisor: Professor Jörn Dunkel, Applied Mathematics
Thesis: Learning and investigating phenomenological models for active matter

Massachusetts Institute of Technology • Cambridge, MA 09/2015 – 06/2017
S.M. in Mechanical Engineering • GPA: 5/5
Thesis on experimental and theoretical modeling of oceanic internal waves

Indian Institute of Technology, Madras • Chennai, India 08/2011 – 06/2015
B.Tech. in Mechanical Engineering • GPA: 9.4/10

Work Experience

The New York Times (Full-Stack) Senior Data Scientist 03/2023 – Present
(Full-Stack) Data Scientist 09/2021 – 02/2023

- *Model Development*
  - Developed real-time machine learning models for subscription-related problems, such as serving a paywall at optimal moments or personalizing messages for users to drive subscriptions
  - Trained causal machine learning and reinforcement learning algorithms such as contextual bandits on massive datasets with millions of rows
  - Translated complex business problems with constraints into multi-objective optimization problems
  - Leveraged statistical estimators to build robust backtesting and counterfactural estimation capabilities for prescriptive machine learning models
- *Model Deployment*
  - Deployed containerized machine learning models for high throughput and low latency applications using Tensorflow-Serving, NVidia Triton Inference Server, Docker, and Kubernetes
  - Wrote performant code in Python and Go in multiple production-grade monorepos across the company
  - Built batch ETL (Extract, Transform, and Load) pipelines to construct datasets for SQL databases using Apache Airflow
  - Managed my team's infrastructure on Google Cloud Platform (GCP) via CI/CD (Continuous Integration, Continuous Deployment) pipelines and Terraform (Infrastructure as Code)
- *Experimentation and Causal Inference*
  - Designed digital Randomized Control Trials (RCTs) to collect causally informative data for training machine learning models
  - Leveraged causal inference on observational datasets to infer the effect of paywalls on user behavior
- *Impact*
  - My work led to an additional hundreds of thousands of subscribers amounting to millions of dollars from subscription revenue
  - Authored technical blog posts and gave conference talks on my work on building batch models (see *this NYT Open Blog*, *this NYT Open Blog*, or *this media interview with VentureBeat*)

Amazon | Data Science Intern, Level 5 06/2020 – 08/2020
Seattle, WA (virtual)

- Developed a causal machine learning model using double/de-biased machine learning to estimate the impact of Amazon Advertising products for sellers from observational data
- Utilized AWS EMR (Elastic MapReduce) clusters and PySpark for processing big data and distributed model training

Massachusetts Institute of Technology | Graduate Researcher and Teaching Assistant 09/2015 – 06/2021
Cambridge, MA

- Built a computational learning framework to infer macroscopic continuum models from microscopic trajectory data of active matter systems such as a collection of self-propelling particles or bacteria
- Constrained

- Leveraged differential programming in Julia to combine neural networks with differential equations to model reaction-diffusion systems
- Modeling complex fluid dynamical systems using theoretical analysis of the governing partial differential equations and parallelized numerical computation
- Published 7 research papers in top-tier journals
- Assisted the teaching curriculum of two courses across five semesters and led recitations and lectures for classes with 60-120 students (average teaching rating: 6.4/7)

Technologies

- Programming: Python, Go, Julia, MATLAB, SQL, VSCode
- Tools: Docker, Kubernetes, Apache Airflow, Google Cloud Platform, Linux, Shell scripting, Git/GitHub
- Packages: PyTorch, Tensorflow, Scikit-learn, PySpark, Pandas, NumPy, SciPy

Honors and Awards

- INMA Global Media Award – Second Prize for "Best Initiative to Acquire Subscribers" (Awarded to my project on machine learning for the paywall at The New York Times) 2023
- MathWorks Engineering Fellowship 2020
- MIT Graduate Student Council Travel Award 2020
- NSF Geophysical Fluid Dynamics Fellowship 2018
- WISE scholarship by DAAD (German Academic Exchange Service) 2014
- AICTE-INAE (Indian National Academy of Engineering) Travel Award 2014

Research Internships

Woods Hole Oceanographic Institution | Recipient of NSF–GFD Fellowship 06/2018 – 08/2018
Woods Hole, MA | Advisor: Professor Neil Balmforth, UBC Vancouver

- Pursued research on the topic of viscoplastic fluid dynamics using analytical and numerical tools

Leibniz University of Hannover | Recipient of DAAD-WISE Fellowship 06/2014 – 08/2014
Hannover, Germany | Advisor: Professor Karen Mulleners

- Performed experiments using tomographic Particle Image Velocimetry (PIV) on flow through lobed nozzles

Teaching Experience

Teaching Assistant, MIT 09/2017 – 05/2020

- Led and assisted teams for designing weekly problem sets, quizzes and final exams. Conducted recitations and review lectures to meet the learning objectives for undergraduate and graduate courses with 60 - 120 students.

Course	Semester	Student Rating
2.25 Advanced Fluid Mechanics	Fall 2017	6.4/7
2.003 Dynamics and Controls	Fall 2018	6.3/7
	Spring 2019	6.4/7
	Fall 2019	6.4/7
	Spring 2020	NA

Kauffman Teaching Certificate Program, MIT 05/2019 – 06/2019

- Completed 8 practice-based workshops, in which participants learn evidence-based teaching techniques

Teaching Assistant, NPTEL IIT Madras 01/2015 – 03/2015

- Prepared online teaching material, problem sets and exams for an all-India MOOC on "Engineering Mechanics" with over 6,000 enrolled students

Professional Service

- Reviewed a total of 6 articles in journals such as Physical Review Fluids, Journal of Fluid Mechanics, Physical Review Research, Physical Review E

PhD Research

Physics-informed machine learning | Learning equations from biological data 01/2019 – 07/2021

- Developed a robust learning framework to infer interpretable continuum equations from particle data while incorporating the relevant physics and symmetries in the system
- Successfully applied the algorithm to learn hydrodynamic equations from microscopic simulation data of a chiral active particle model mimicking swimming cells and from microroller experiments
- Modeled reaction-diffusion systems by combining Partial Differential Equations with Neural Networks

Active turbulence forced by linear instabilities 09/2018 – 01/2020

- Extended a novel method for forcing turbulence that enables data-driven phenomenological modeling of pattern-forming systems on rotating spheres, such as planetary atmospheres
- Derived analytical solutions and performed numerical simulations using the Python package Dedalus to validate model behaviour

Motion of active and passive cylinders in viscoplastic fluids 06/2018 – 09/2019

- Derived exact analytical nonlinear solutions and compared them with numerical simulations of Bingham fluid flow around smooth and partially rough cylinders
- Developed a model for squirmers by prescribing cylinder surface velocity to understand the swimming behaviour of micro-organisms in viscoplastic fluids

Leadership Experience

Events Officer, MIT SIAM Chapter 12/2018 – 12/2020

- Organized monthly seminars by professors and graduate students across various departments
- Planned events to promote collaboration in Applied Mathematics and Computation within and beyond MIT

Vice President, MIT Tang Hall Student Government 09/2017 – 09/2018

- Organized monthly strategy meetings and oversaw the operations affecting over 300 graduate students
- Advocated and provided input to the MIT Administration for renovations in the Tang hall building

Orientation Chair, MIT Graduate Association of Mechanical Engineers 04/2017 – 10/2017

- Planned events for incoming graduate students to expose them to the departmental social life and academics
- Managed a mentorship program to connect incoming students with mentors based on professional interests

President, MIT Sangam 04/2016 – 04/2017

- Planned and organized monthly social events as a part of the largest Indian cultural organization at MIT
- Conducted a three-day orientation program for incoming MIT students in Delhi, India
- Led a team of 40 officers and volunteers to organize the annual Indian cultural show that brings over 300 attendees from the Greater Boston Area

Hobbies

- Alpine Skiing • Hiking
- Long-distance running | current personal records: marathon (3:17:51), half marathon (1:34:13), 5k (19:01)
